<p>Optional/General comments</p>	<p>The manuscript use an non-chemical method to manage the studied aphid, However I think the methodology needs to improve , for instance the trap cropping ratio is obscure and should be explain 3:2 1:1 and etc what do they mean? Statistical analysis should be revised and mention which software was used? The treatments are correctly arranged? Why do the authors use the aphid density on each plant (cabbage and mustard) separately as a treatment?!! Overall, I think this manuscript needs to major revision.</p> <p>Sincerely yours.</p>
