

### **Editor's Comment:**

I consider the topic of the manuscript relevant. The research results have scientific and applied value.

At the same time, I had some comments about the text of the manuscript, namely:

1. Authors should check the text of the manuscript for compliance with all design requirements. In particular, if the authors submit the material on page 3 in tabular form, then it is necessary to complete this table (number, title, reference in the text).
2. Authors should also check the text of the manuscript to find and eliminate technical errors. For example, I can't find a reference to Table 2.
3. I also recommend checking the grammar. Some sentences and table titles could be better worded. For example, this applies to the title of table 2 (What is the resulting variable?).

Thus, I believe that after taking into account the listed remarks, the document on the topic "Influence Of Weather Parameters On The Incidence And Severity Of Guava Scab Caused By Pestalotiopsis Psidii (Pat.)" can be published.
