

Editor's Comment:

I have gone through the comments of the two reviewers . The author has carried out the comments of one reviewer by including the latest references .My observation on the article is that the author in the introduction has not stressed the need for taking up biostimulation followed by phytoremediation of WMO. in the materials and methods, no mention how 39000 ppm of WMO has been fixed , no soil properties data of experimental soil , . Results and discussion need little more refinement . The research problem selected is good , but output in terms of paper writing is not upto the mark.
