

**Editor's Comment:**

Having thoroughly reviewed the updated Peer Review Information and considering the revisions made to the manuscript, I am pleased to inform you that all the modifications requested by the peer reviewers have been satisfactorily addressed by the authors. In my opinion, the manuscript is now well-prepared for publication.

The authors have demonstrated commendable diligence in incorporating the feedback, and the revised version of the paper presents its findings clearly and convincingly. The research adds valuable insights to our understanding of hypertension prevalence in correctional settings, particularly within the Nigerian context, which is an underexplored area in current literature.

Please proceed with the next steps for publication.
