

Editor's Comment:

I have read the text of the manuscript, the reviewers' reports, and a revised version of the text of the manuscript.

I consider the topic of the manuscript relevant. The research results have scientific and applied value.

At the same time, I had some comments about the text of the manuscript, namely:

1. The text of the manuscript does not fully meet the requirements for its design. Authors should check the correctness of the design of their article. Particular attention should be paid to the correct design of the names of sections and subdivisions. It is also necessary to properly design the table and refer to it in the text.

2. It is also necessary to check whether all the sources from their list have appropriate references in the text of the manuscript.

3. In my opinion, the content of this article has a review character, since the authors mainly analyze the literature. Therefore, at the end of the Introduction, it is necessary to indicate the relevant goal of the research, and in the Conclusions to show that this goal has been achieved.

4. Authors must make a final check of grammar, absence of typos and availability of all necessary references to sources of information. For example, in section 3 it is noted that recent research has revealed the necessity of additional elements like vanadium, silicon, cobalt, sodium, and nickel for the growth of specific plants. However, I don't see any references to the sources of this information.

Thus, I believe that after taking into account the listed remarks, the article on the topic "Alteration in Flowering and Fruiting of Commercial Vegetable Crops under Protected Condition " can be published in the International Journal of Environment and Climate Change.
