SDI EDITORIAL COMMENTS FORM

EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
1. . The authors confirm that they accepted the reviewers' suggestions, but it is very difficult to identify these changes in the revised article. I suggest that in future we ask for the changes to be marked with a different colour or with a marker.	The author highlighted the changes has been made
2. Regarding this article, the discussion chapter does not fulfill what would be expected. The authors basically repeat the results without comparing them with other studies that have obtained (or not) the same results (or contrary results).	2. discussion section also change
3. The conclusion remains very poor, not reflecting the objectives of the study.	Conclusion has been revise as per recommendation
