

Review Form 1.7

Journal Name:	Microbiology Research Journal International
Manuscript Number:	Ms_MRJI_109690
Title of the Manuscript:	ASSOCIATION BETWEEN RISK FACTORS AND TRICHOMONIASIS AMONG WOMEN IN PORT HARCOURT RIVERS STATE ,NIGERIA
Type of the Article	Research article

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>1. 1. Although the risk factors for acquiring sexually transmitted infections are widely known, it is always important to know the risk factors of a given region.</p> <p>2. 2. The objective of the study is reflected in the title</p> <p>3. 3. The summary reflects the most important findings of the study</p> <p>4. Subsections are appropriate</p> <p>5. I consider that the association made about the risk attributed to tight clothing or changing underwear would not be a risk factor in itself for acquiring the infection. This can exacerbate the infection from presence to disease, but not cause it. This risk could be attributed to another type of microorganism that may be in the microbiota and humidity or uncleanliness can cause dysbiosis. Misinformation can be a risk for those people who, out of ignorance, do not take care.</p> <p>6. Because trichomoniasis is the most common STI in the region studied, it was possible to seek experiences in other latitudes. In the discussion, prevention measures for these risks are not proposed.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>It is not my native language and I cannot determine the perfection of the language, but for me it was totally understandable.</p>	
<p>Optional/General comments</p>	<p>The indication of tight clothing and uncleanliness must be placed in the proper context for Trichomas and other sexually transmitted infections. They also assert that there is no contagion from man to man, which is not true.</p>
