<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p>Optional/General comments</p>	<p>As the whole study is based on post-operative observations of different surgeons and their records only, it is little weak in internal validity. Statistical difference between overall incidence (4.3%) and intra-operative complication rate (8%) is there. Where as one statement is there pointing out that "all cases with intra-operative complications went on to develop surgical emphysema." Age group specific incidence rates could refine the manuscript more.</p>
