

Article Review

Laparoscopic sleeve gastrectomy

Title: 1. the title should be two years Clinical outcomes (since it is linked to clinical resolution of comorbidities).

2. (2) should be replaced by Two in the title and (year) should be (years).

3. The title is in lack of time place and methodology sense.

4. The author needs to highlight why out of 4 bariatric surgery approaches, they only focus on this specific approach.

5. In the abstract and in the article, the author needs to mention the study objectives clearly.

6. The study mainly focus on two years outcome, yet there is high relapsing rate after two years, please highlight this area.

7. In the text the author mention prevalence of diabetes is 62 million case, it is better to mention it in % or rate beside the absolute number.

8. The author elaborate more on surgery technique, which needs to be appreciated as it has no relevancy to the study objective.

9. The author needs to elaborate more on postoperative management, nutrition and life style better than operation techniques.

10. Operational definition of variables are requested in relation to obesity classes and reference of similar classification should be acknowledged.

11. The author needs to discuss the partial resolution and non-resolution cases and give more explanation and comparison of this group.

12. Study design should be acknowledged properly, and data collection procedure needs more elaboration.

13. Study limitations and restrictions needs to be acknowledged.

14. Policy implications should be communicated.

Conclusion:

Accepted for publishing after revising the abovementioned points
