

Editor's Comment:

The article was reviewed...respecting the opinions of the honorable referees, it is not acceptable due to the following reasons and the current situation

1. Review of sources is very partial
2. An article with 5 references is not an interesting situation at all and needs to be re-examined
3. The obtained results have not been compared with the latest results in the world, so that the user can benefit from the correctness of the results.
4. Finally, since our goal is to improve the quality of the magazine, articles that do not have the necessary quality are not acceptable in my opinion.
