

Editor's Comment:

I could not find the changes that the authors proclaim to have them made as they are not marked. Thus for me and probably other readers it would really be interesting to know the exact status of the patient's vigilance at the moment of intubation. But, reading the revised article, I could not find a hint on this status.

Editor's Details:

Dr. Oswin Grollmuss
Professor, Congenital Heart of Centre Chirurgical Marie Lannelongue, University Paris XI, France.
