EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
I think, indeed, the crucial point of this article is the question, pointed out by reviewer 1, if the patient was really awake AND SPONTANEOUSLY BREATHING which is not likely under a medication of fentanyl, propofol and cisatracurium that should lead to respiratory muscle's paralysis.	It looks like the case was not reviewed by an anesthesiologist. I made a small modification to the text.
