

Editor's Comment:

Major revision

Article

Integration of Remote Sensing and GIS for modelling surface run-off: Case study of Marbeea-Alshareef, Sharq Elneel, Sudan.

- 1) First of all, manuscript should be prepared following the guide given by the journal, although I am sure that during editing process it is going to be improved.
- 2) Introduction is short, need more articles and citations, some of them can be obtained from open sources like these:
 - <https://www.mdpi.com/2073-4441/12/2/558>
 - <https://www.mdpi.com/2072-4292/11/11/1355>
 - <https://www.mdpi.com/1660-4601/18/18/9511>
 - <https://nhess.copernicus.org/articles/12/1641/2012/>
 - <https://www.mdpi.com/2073-4441/11/5/920>
 - 10.3232/SJSS.2012.V2.N1.04
- 3) More emphasis should be presented regarding the importance of topography and the impact of buildings and soil sealing.
- 4) References should be cited in a proper way, not only leaving the link. Please, check this.
- 5) Methodology is more or less, well described but too short.
- 6) No statistical treatment was applied. I do not know what to say about this.
- 7) Results are, in fact, a description of processes.
- 8) In general, the quality of the article is low. However, it would have local and regional importance. In such a way, I do not want to reject it.
