

Review Form 1.6

Journal Name:	European Journal of Medicinal Plants
Manuscript Number:	Ms_EJMP_94648
Title of the Manuscript:	STUDY OF THE EFFECT OF HYDROETHANOL EXTRACT OF ANNONA SENEGALENSIS LEAVES ON THE ACTIVITY OF BITIS RHINOCEROS (VIPERIDAE) VENOM IN BLOOD COAGULATION
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalejmp.com/index.php/EJMP/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Must state that this is an in-vitro study.</p> <p>A useful study as AV is not freely available and justification is well expressed but the Introduction must refer specifically to work done earlier with appropriate references of this particular plant leaves and not merely generalising the use of herbs for snakebite.</p> <p>Is there evidence to show the precise mechanisms by which the secondary chemical components extracted from this plant leaves to have brought about a normalisation of coagulopathy? If so give the appropriate references, if not describe the hypothesis to be tested by this study. The biochemical details of the herbal extract and the hypothesised mechanism of action on the clotting cascade must be described,</p> <p>Detail numbers, sex and ages of the volunteers used and the number of samples in the distribution to the different test groups must be clearly stated to show the statistically significant equity of the different test groups included. Also the sampling method to the test and control groups must be described.</p> <p>Correction of grammar and a better presentation will add to the clarity of this article as it is too complicated to understand the scientific methodology, results, analysis and the conclusions arrived at from these results.</p> <p>Topic needs to be changed for greater clarity and appropriateness of the study, suggest: AN IN-VITRO STUDY OF THE EFFECT OF HYDROETHANOL EXTRACT OF ANNONA SENEGALENSIS LEAVES ON BITIS RHINOCEROS (VIPERIDAE) VENOM INDUCED COAGULOPATHY.</p>	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
