

### **Editor's Comment:**

The revised manuscript needs to take care of the following flaws prior to be accepted for publication:

1. Duplicated keywords (same as the paper title) must be re-chosen.
2. Every equation needs to be numbered.
3. What is "q ha<sup>-1</sup>"?
4. Many punctuation errors have been detected.
5. All acronym names such as DAT must be defined when first appear.
6. Be uniform with capitalization, not "Kg" and "kg".
7. The conclusion is too brief. A short descriptive of the purpose and design of the experiment may be helpful. Besides, important practical implications derived from significant study results must be included both in the abstract as well as in the conclusion.
8. The format used for reference listing should conform to the requirement of the journal, especially the punctuation part.
