

Editor's Comment:

The abstract is very large—more than 350 words. There are no methods, sampling, sample size, variables, or statistical analysis in the abstract.

Three first paragraphs in the introduction without any reference.

In methods there are not any sampling methods or sample sizes, The variables are not defined.

In results reported the average age and range but ¿the standard deviation?

Results

The results should re-writing. It is confusing and repeats the information.

The references are in bold the authors. There are not any doi's.

The authors did not use the template from the journal.

The manuscript should be to review.
