

Editor's Comment:

Both reviewers have minor revision requests to the work, but after checking the revision, it seems the authors did not consider and marked all comments.

1. In the reviewer's comment, 'The conclusion does not match the results of the study', it seems the authors did not consider this comment in the revised manuscript.
2. In the reviewer's comment, 'The references are very few ', Any new references added?
3. In the reviewer's comment, 'The frequency number if given in the ares of the Fig will benefit the readers.' I assume the reviewer ask the authors to mention the exact frequency values in the figure area, for example, above the bars in the bar figures. Authors did not consider this comment at all.

Considering these points, the current version can not be published. Please send the work back to the authors to address all reviewers' comments carefully. All modifications in the revised manuscript should be clearly highlighted and marked.
