

Editor's Comment:

- What do you mean by glaucoma symptoms specially if POAG which is almost discovered accidentally and in your table that symptoms were present in all cases?
- Duration of glaucoma symptoms is repeated in table 1 and 2, you can remove from table 1.
- Your study included 220 patients but in table 3 you write 253 patients.
- Table 3 better to be titled associated ocular diseases.
- Your glaucoma patients, you didn't mention if previously diagnosed or not and if yes what glaucoma medications they received.
- You didn't mention anything about the visual field of your patients specially POAG, and normal tension glaucoma.
- Angle closure glaucoma patients were at which stage.

Decision:

Major revision is needed specially in Methodolgy section.
