(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)	The article shows a good research work on the estimation of runoff in data scare watershed of middle Gujarat. However, the literature review is not very comprehensive, and the results should be supplemented with summary statistics, Durbin Watson statistic, chi-square statistic etc to make results more robust and acceptable in the research. Yes, the title of the article is suitable. Yes, the abstract of the article is comprehensive. The structure and the subsections of the manuscript can be worked upon to improve it. There is no section of literature review in the manuscript till now. It becomes confusing for the reader now, so separate section of literature review should be added in the paper. Improvement in the structure of the paper is recommended. Yes, the manuscript is scientifically correct. References are less and the research work should be supplemented with more recent references. Emphasis should be made on citing recent work more.	
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	Yes
