

### **Editor's Comment:**

I have read the text of the manuscript, the reviewers' reports, and a revised version of the text of the manuscript.

I consider the topic of the manuscript relevant. The research results have scientific and applied value.

At the same time, I had some comments about the text of the manuscript, namely:

1. I recommend starting the abstract with the formulation of the purpose of the study: "The purpose of this study was...". Also, the purpose of the research should be stated at the end of the Introduction.
2. The text of the manuscript does not fully meet the requirements for its design. Authors should check the correctness of the design of their manuscript. Particular attention should be paid to the correct design of the names of sections and subsections. Perhaps the authors should review articles that have already been published in this journal. Authors will then have a template for adjusting the design of their manuscript.
3. Authors should also review grammar. Some sentences could be worded better. For example, this applies to the following sentence in the last paragraph of the Introduction: " Two cuts are regularly administered at various times in an oat crop, however the first cut at 55 Days after sowing and the second cut at 50 % flowering, on the other hand, provided the best growth and output. (Sharma et al. 2001)".
4. I ask the authors to check the text of the manuscript for the elimination of typos. For example, it seems to me that in the sentence quoted above, the period should not be before, but after the parentheses. Also, I cannot find a reference to Table 2 in the text of the manuscript.

Thus, I believe that after taking into account the listed remarks, the document on the topic "Effect of fodder cutting management on quality of different varieties of oat (*Avena sativa* L.)" can be published in the International Journal of Environment and Climate Change.
