

Editor's Comment:

The study analysed the level of utilization of digital tools by college and university professors in Tamil Nādu. The survey method with simple random sampling was used. Data were presented using frequencies, 't-tests, ANOVA, and Pearson Product Moment correlation. The findings were well documented. The study demonstrated that the utilization of digital tools is very essential for today's technological world. So, the government, curriculum framers, private NGOs and stakeholders must give more priority to these digital tools. The research was very preliminary, but it paves the way for more in-depth studies on the subject. The reviewers were very positive and made suggestions for minor improvement, and author has revised the manuscript accordingly. I therefore support publication in the Asian Journal of Education and Social Studies.
