

### **Editor's Comment:**

We need following changes before acceptance:

-99.86 males per 100 females

The Sex Ratio in Sudan in 2021 is 99.86 males per 100 females. There are 22.44 million males and 22.47 million females in Sudan

-Explain how the study sample is representative of Sudan...

---One of the limitations in our study was that males sample size was less than females, but the overall sample was statistically representative.

Study age group is 18-80. why there is no data on the 60-80 age group

-How did you select healthy volunteers? Please explain the process and also what chronic diseases you excluded-

-Please go through each line and correct spelling mistakes, capital letters and grammar--eg: evidences-- can use evidence--more clear--you can use clearer

PRovide data on the gender ratio in each state--that can help to exclude that the regional difference is not just before of the sample variability or due to regional variability

In my current study, the ---remove my

However, plus pressure was comparable. ---It is pulse pressure
