

Editor's Comment:

I have read the text of the manuscript, the reviewers' reports, and a revised version of the text of the manuscript.

I consider the topic of the manuscript relevant. The research results have scientific and applied value. At the same time, I had some comments about the text of the manuscript, namely:

1. The type of this document should be specified as Review Article.
 2. The purpose of this research should be indicated in the abstract.
 3. The purpose of the research should also be indicated at the end of the introduction.
 4. The text of the manuscript does not fully meet the requirements for its design. Authors should check the correctness of the design of their manuscript. Particular attention should be paid to the correct design of the names of sections and subsections and references to sources. Perhaps the authors should review articles that have already been published in this journal. Authors will then have a sample for adjusting the design of their manuscript. For example, you can view this document:
<https://journalijecc.com/index.php/IJECC/article/view/1952/3873>
 5. It is necessary to check whether all abbreviations are deciphered at the first mention.
 6. Items in section 9 (9.1, 9.2, etc.) should be issued as subsections of this section.
- Thus, I believe that after taking into account the listed remarks, the article on the topic "A revolutionary strategy for crop improvement: Genome editing" can be published in the International Journal of Environment and Climate Change.
