

Editor's Comment:

This study is of obvious practical concern.

Yet, part only of the important recommendations of one Reviewer have been accounted for.

In particular :

the Results & Discussion section is rather a simply commented exposure of results, without a true Discussion – which is a little damageable for what should be an authentic original research report ; the Abstract is to be rewritten in depth with deleting the repetition of the title and conforming to the relevant Reviewer requirements to which I agree completely. Namely: adjust the Abstract as in form of introduction, methods, result, and conclusion

Accounting properly to the second point at least is mandatory before the newly revised manuscript might be accepted for publication in IJECC.
