

Editor's Comment:

I have gone through the manuscript and appreciate the efforts taken by the author in addressing the comments of the peer reviewers. In addition to this I would suggest a few modifications to improve the manuscript.

1. Please attach the pre-operative and post-operative OPGs
 2. Pl justify the decision for violating the safe implant zone in the mandible.
 3. Please justify the decision to select the ball attachment over locator attachment, other than the cost factor.
 4. Please add pictures for jaw relations to explain the inter arch space
 5. please justify the necessity for primary metal bar reinforcement in mandibular denture.
- These modifications will improve the credibility of the manuscript.
