

Review Form 1.7

Journal Name:	Journal of Complementary and Alternative Medical Research
Manuscript Number:	Ms_JOCAMR_100442
Title of the Manuscript:	Anti-Arthritic effect of the aqueous extracts of the roots and barks of Gossypium herbaceus in Complete Freund's adjuvant induced arthritis in female wistar rats
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>1. Yes.</p> <p>2. Yes.</p> <p>3. No. The title used anti-arthritic effect, why the abstract used rheumatoid arthritis. Actually, the CEF causes infectious induced inflammation, not autoimmune induced inflammation as the RA. This part should be rewritten by emphasizing what were found.</p> <p>4. Almost. This is an animal research model but no ethics approval was declared. Similar to the above, arthritis, not specific to RA, was studied in this presentation. The CuSO4 also causes chemical induced hemolysis, not autoimmune. Some processes were not described; how much and which location the blood was collected, how long blood was collected before analysed, and how the blood parameters were analysed.</p> <p>5. Yes.</p> <p>6. Some are too old. Some analytic methods used in this presentation are quite old even though nowadays there are more specific tests available.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	OK	
<p>Optional/General comments</p>		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
