

Editor's Comment:

I can not accept this paper for publication in our journal. It is well known that both plant spacing and nitrogen nutrition affect the growth of plants, and the experimental design and discussions in this study are not sufficient - "It was laid out using three main spacing treatments combined with four sub-treatments of nitrogen levels", and this manuscript also has some defects as suggested by the referees - "poor written paper. Use cut and pest his thesis research work require improvement."
