PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Overall, this study contributes valuable insights into the knowledge and perceived susceptibility to chronic kidney disease among auto-mechanics and allied professionals in Nigeria. It underscores the need for targeted health education programs and interventions to raise awareness, improve knowledge, and promote preventive behaviors to mitigate the impact of chronic kidney disease in this vulnerable population. Further research is warranted to assess the effectiveness of such interventions and to explore the broader prevalence and risk factors of chronic kidney disease in Nigeria.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>The study's findings shed light on the lack of awareness and knowledge about chronic kidney disease among auto-mechanics and allied professionals in the study area. The researchers emphasized the importance of educational interventions and public health campaigns to improve awareness, promote preventive measures, and reduce the burden of chronic kidney disease in this population.</p> <p>The study's limitations included the use of a small sample size and the focus on a specific geographical area, which may limit the generalizability of the findings.</p>	
<p>Optional/General comments</p>	<p>The study conducted by the researchers aimed to investigate the knowledge and perceived susceptibility to chronic kidney disease among auto-mechanics and allied professionals in the Bodija community of Ibadan North Local Government Area, Nigeria. The study is of significant importance as chronic kidney disease is a growing global public health epidemic and its prevalence in Nigeria, particularly among the working-age population, is not well understood.</p>
