

Editor's Comment:

Authors have revised the manuscript based on the comments. However, manuscript still has several grammatical errors. For example:

1. "At the end of the experiment, there were" grammatical error
2. "neurobehavioural" spelling error
3. "The result from this work suggest" grammatical error
4. "Then phenomenon of chemotherapy-related cognitive impairment (CRCI) or chemo-brain." grammatical error

Similarly it has many errors those need to be corrected before publication.
