

Review Form 1.7

Journal Name:	Asian Journal of Research and Reports in Endocrinology
Manuscript Number:	Ms_AJRRE_100246
Title of the Manuscript:	“Clinical and epidemiological characteristics of new-onset Diabetes Mellitus Type 1 during the COVID -19 pandemic in a third level center, Lima -Peru”
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajrre.com/index.php/AJRRE/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Due to small sample size, it is difficult to say whether this study is useful to community. We need more real world data to prove this.</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Diagnosis specially Type 1 should be based on as minimum with one positive autoantibody. Mere urine ketones positive can't be a base of type 1 DM. Other specific causes of diabetes need to be ruled out. In covid time, due to high dose of steroid also caused hyperglycaemia which could be a resulting positive urine ketone. And urine ketones sometimes can be subjective or lab error.</p> <p>Rather than mentioning type 1 aetiology, covid induced diabetes could be a better term. Treatment prescribed should be mentioned somewhere in manuscript as there are plenty of myths associated with type 1 DM.</p> <p>However, this manuscript should be reassessed for better presentation.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	Yes	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
