

Editor's Comment:

I have carefully read through your manuscript "Anamnesis in Alzheimer's Disease: a Review and Proposal" and I am delighted to inform you that we have decided to accept it for publication.

Your comprehensive exploration of anamnesis and its relevance in the diagnosis of Alzheimer's disease is highly engaging, while your detailed methodology and the use of diverse sources contribute to the overall rigour of your study. The deductive reasoning you propose, integrating the current scientific method with anamnesis procedures, provides a robust path forward in the diagnostic process.

Your work is expected to have a significant impact on the field of psychiatric diagnostics, particularly in relation to Alzheimer's disease, and to stimulate important conversations among practitioners and researchers alike.
