### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The study is relatively well designed and executed and the results are of potential interest for the readership of the journal. However, some major revisions should be undertaken prior to the publication of this manuscript. Firstly, there are some issues with the English (syntax, grammar, etc.). Introduction: The authors do not cite relevant literature and thus seem to lack knowledge on prior art/state-of-the-art. Methods: The methods are not sufficiently well-described for the study to be reproducible. Results: 1- The odds ratio (OR), adjusted odds ratios (AOR), and confidence interval (CI) should be presented in the Tables 1. Discussion: Many of the discussion sentences are redundant to the results. In fact, this section is extremely poor. Here, should be addressed the main results and problems of the study. I recommend writing a new discussion and not improve this.	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
