PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--|--|---|
| <p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in thereview form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p> | <ol style="list-style-type: none"> This research is quite important to the scientific community The research title is sufficient to represent the contents of the case report The abstract structure is appropriate enough and represents the entire contents of the article The structure of the article is sufficient The text is scientifically correct The renewal of the References is good enough, even though there are still 4 of the 13 References which are old references. Please add Family History, Medical History, and Body History to the patient Is there a bacterial culture test to help with the type of bacteria? E.g. Culture with Blood Agar and Identification of Bacteria by Gram Staining Please include the criteria for Pyoderma Gangrenosum from A Delphi Consensus of International Experts, as well as a scoring calculation for a definite diagnosis of Pyoderma Gangrenosum In the discussion section, please explain the use of the Delphi Consensus of International Experts, namely "Delphi exercise yielded 1 major criterion—a biopsy of ulcer edge demonstrating neutrophilic infiltrate—and 8 minor criteria: (1) exclusion of infection; (2) pathology; (3) history of inflammatory bowel disease or inflammatory arthritis; (4) history of papules, pustules, or vesicles ulcerating within 4 days of appearing; (5) peripheral erythema, undermining border, and tenderness at ulceration site; (6) multiple ulcerations, atleast 1 on an anterior lower leg; (7) cribriform or "wrinkled paper" scar(s) at healed ulcer sites; and (8) decreased ulcer size within 1 month of initiating immunosuppressive medication(s). Receiver operating characteristic analysis revealed that 4 of 8 minor criteria maximized discrimination, yielding sensitivity and specificity of 86% and 90%, respectively." | |
| <p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p> | <ol style="list-style-type: none"> English quality of the article suitable for scholarly communications | |
| <p>Optional/General comments</p> | | |
