Editor's Comment:

This paper is titled "Beta Volatility Coefficient And Model Accuracy Measure To Identified Robust Garch Models With Symmetric And Asymmetric Process" is very interesting, The author introduces Beta Volatility Coefficient (BVC) and Model Accuracy Measure (MAM) for the different sample sizes: 50, 100, 150, and 200, robust models.

The author addressed the main concerns from the reviews, the revised version of the manuscript appears to be good. It looks READY for publication.
