### **Performance Characteristics and Blood Metabolites of Weaner pigs Fed different Feed Grade Coded MUSARPOMS**

#### **Abstract**

A new feed grade coded MUSARPOMS 25 %, 50 % and 75 % at 10 and 20 % replacement level was used as a case study to determine growth performance and blood metabolites of weaner pigs. Twelve weeks feeding trial was conducted to determine the performance and some haematological parameters of weaner pigs fed MUSARPOMS diets as replacement for maize. Twenty ~~Eight-eight (28)~~ ~~6~~ ~~six~~ weeks' old weaner pigs with an average weight of 8.00kg were randomly allocated to ~~7~~ ~~seven~~ treatments of 0 (Control), 25 %, 50% and 75% at 10 and 20 % replacement levels of MUSARPOMS 25 % Grade (25 % ripe plantain peels and 75 % Palm oil mill slurry mixture), MUSARPOMS 50 % Grade (50 % ripe plantain peels and 50 % Palm oil mill slurry mixture), and MUSARPOMS 75 % Grade (75 % ripe plantain peels and 25 % Palm oil mill slurry mixture). Each treatment had four ~~(4)~~ ~~replicates~~ made up of ~~2~~ ~~two~~ male and two female. Data were collected on live weight, weight gained and feed intake while feed efficiency and feed conversion ratio were determined. The average initial weight, final live weight, total weight gained and daily weight gained showed no significant ( $P > 0.05$ ) differences in growing pigs across the ~~Treatments~~ ~~treatments~~. Feed conversion ratio and feed efficiency did not differ significantly ( $P > 0.05$ ) from the ~~Control~~ ~~control~~. Some haematological parameters, fasting blood sugar and serum protein were tested for each 28 growing pigs at the end of the feeding experiment. Results of the full blood count revealed that the white blood cells and its differentials showed no significant ( $P < 0.05$ ) differences except ~~Monocyte~~ ~~monocytes~~. Serum protein and glucose ~~shows~~ ~~showed~~ no ~~significance~~ ~~significant~~ ( $P > 0.05$ ) differences in ~~Globulin~~ ~~globulin~~, ~~Total~~ ~~total~~ protein and ~~Glucose~~ ~~glucose~~. Based on the results of this experiment, it can be concluded that feeding "MUSARPOMS" grades at 10% and 20% levels compared well with the conventional energy feedstuff. The growth performance of the pigs indicated adequate utilization of the three MUSARPOMS grades developed.

#### **Introduction**

Animal feed is an essential part of livestock production; the availability and affordability are key factors for maintaining sustainability of the livestock industry. Monogastrics (especially swine and poultry), have made very important contributions to the production of animal protein in many Countries around the ~~World~~ ~~world~~ (Oloju, 2011). Conventional energy and protein feed sources for livestock feed production are extremely expensive and scarce (Tewe, 2004; ~~and~~ Ogunwole *et al.*, 2017). Plantain peels are discarded as waste after the inner fleshy portion has been eaten, thereby constituting a menace to the environment (Okare *et al.*, 2015). Palm oil mill slurry is basically a waste material from the palm oil mill industry which is a major waste

product usually more than palm oil, which is the primary product (Heuzé~~etal.~~, 2015). Consequently, a study was carried out using plantain peels and palm oil mill slurry to develop a feedstock~~ed~~ named *Musarpoms* from locally derived non-conventional feed-stuffs for animal production. Plantain peels and palm oil mill slurry were in proportion to develop feed grade 25, 50 and 75 % *Musarpoms*. It was observed that the reducing levels of *MUSARPOMS* fermented mixture grade formulations, resulted in proportional increase in the *Crude-crude* protein of the emerging ingredients Ekhurutomwen and Nwokoro (2022) as presented in Table 2. However, ~~Formulation-formulation and Development-development of a Feed-feedStock-stock Codecode Named-named Musarpoms from Locallylocally-Derived-derived Nonnon-Conventional-conventional Feedfeed-Stuffsstuffs for Animal-animal Production-production was developed by Ekhurutomwen and Nwokoro (2022).~~

~~The aim of this study was to determine p~~Performance characteristics and blood metabolites of weaner pigs fed different feed grade coded *MUSARPOMS*, ~~was determined in this study.~~

### MUSARPOMS Development

Fresh palm oil mill slurry was used to mix the ground *Ripe-ripe* plantain peels properly. The component mixture was weighed and mixed at different proportion to produce the *MUSARPOMS* 25 %, *MUSARPOMS* 50 % and *MUSARPOMS* 75 % grades. These were then spread on flat trays and allowed to age before drying. The sundried *MUSARPOMS* grades were milled and bagged for chemical analysis. Samples of each *MUSARPOMS* grade (25 %, 50 % and 75 %) after drying were taken for proximate analysis (crude protein, crude fibre, ether extract, ash and nitrogen free extract) using AOAC (2010) procedures. The mineral content of the plantain peel ~~were was~~ determined using the flame photometer. *MUSARPOMS* were also examined for some physical characteristics (colour, smell, etc).

***MUSARPOMS* 25% Grade:** This contained 25 % ripe plantain peels and 75 % *Palm-palm* oil slurry. The fresh *Palm-palm* oil mill slurry (*POMS*) was collected in a plastic container. A total of 250 g of the milled ripe plantain peels (91.11 % DM) mixture was measured out in a wide plastic bowl and then 750 g of the palm oil mill slurry (26.48 % DM) were weighed out and put in the bowl while stirring thoroughly. The palm oil slurry and the plantain peels were thoroughly mixed. The mixture was dispensed into containers for ageing at 3 days with intermittent turning and overturning, when completely dried, the *MUSARPOMS* 25 % grade was milled and bagged.

***MUSARPOMS* 50 % Grade:** This Contains 50 % plantain peels and 50 % palm oil mill slurry (*POMS*). The procedure for development was exactly the same as in the formulation of *MUSARPOMS* 25 % except that 500 g palm oil mill slurry was measured out and mixed with 500 g ripe plantain peels.

***MUSARPOMS* 75 % Grade:** This contains 75 % plantain peels and 25 % palm oil mill slurry (*POMS*). Also, 750 g ripe plantain peels was measured out and mixed with 250 g palm oil mill slurry. The procedure for development was exactly the same as in the formulation of *MUSARPOMS* 25 %.

~~Experimental design and statistical analysis: Data collected were subjected to a one way Analysis of Variance using GENSTAT 2009 (12th Edition) package. Means were separated using Duncans Multiple Range tests (Steel and Torrie, 1980) at 5 % level of probability.~~

This study was carried out at the Piggery Unit of the University of Benin Teaching and Research Farm, Ugbowo Campus, Benin City, Edo State, Nigeria. Benin City is located between latitude 6° and 30°N of the Equator and longitude 5° 40' and 6° E of the Greenwich meridian in the rain forest zone, with mean monthly temperature of 27.6 °C. The area has an average annual rainfall and relative humidity of 2162 mm and 72.5 % respectively (Metrological Section of the Nigeria Airport Authority, Benin City, Edo State, Nigeria, 2021).

### **Housing and Experimental Design**

The experiment was a 4 x 2 factorial arrangement with pigs randomly allocated in a Completely Randomized Design (CRD). The study ~~comprise~~**comprises** of a total of seven diets [i.e. 0, 25% (10, 20), 50% (10, 20) and 75% (10, 20)]. These seven (7) diets were replicated four times on weight equalization basis such that there were four (4) pigs per Treatment (2 male and 2 female) thereby using each animal as a replicate. The pigs were housed in a concrete floor with metallic sheet roof partitioned with rods. The housing system ensured cross ventilation.

Formatted: English (United Kingdom)

### **Adaptation, Management and Data Collection**

A total of ~~Twenty twenty~~ eight (28) weaned pigs with an initial weight ranging from 8.00kg - 10.13kg were used for this study. The pigs were fed *ad libitum* and watered for 10 weeks of study during the preliminary (adaptation) period of two week prior to the commencement of the feeding trial, during which animals were prophylactically treated for any diseases and stabilized to the new environment. The weight of the weaner pigs were taken at the end of the acclimatization period. Thereafter, the weight was taken weekly till the experiment was terminated. Some haematological parameters, fasting blood sugar and serum protein were tested for each of the 28 growing pigs at the end of the feeding experiment and placed in three different sample bottles. One containing speck of ethylenediamine tetra acetate (EDTA). Parameters were measured using the procedures by Loeb and Quimby (1999) and Dhanotiya (2004).

### **Statistical analysis**

Data's collected during the experiment were subjected to analysis of variance using Genstat 2009 (12<sup>th</sup> Edition) package. The separation of means ~~were~~**was** carried out using Duncan's Multiple Range Tests (Steel and Torrie, 1980) at 5 % level of probability.

Formatted: English (United Kingdom)

### **Composition of the weaner pig diets**

Formatted: Font: Bold

The composition and chemical components of the diet used to feed weaned pigs in the feeding trials are represented in Table 1 and Table 2.

The average initial weight, final live weight, total weight gained and daily weight gained showed no significant ( $P > 0.05$ ) differences in growing pigs across the ~~Treatments~~treatments. Feed conversion ratio and feed efficiency did not differ significantly ( $P > 0.05$ ). Treatment 7 (MSP<sub>75%</sub> with 20 % replacement) recorded the least feed consumption (97.50 kg) whereas Treatment 2 (MSP<sub>25%</sub> with 10 % replacement of maize) recorded 126.50 kg. The results from this study showed that Utilizing ~~these ingredient~~these ingredients as a partial replacement for the conventional energy source (~~Yellow-yellow Maize~~maize) did not have significant influence on the performance of the growing pigs in both sexes. Weight gain in particular did not differ significantly among Treatments. It is therefore indicative that the *MUSARPOMS* grades at the respective replacement levels (10 and 20 %) compared well with maize (0%) of their inclusion in diets. [The haematological response of growing pigs fed diets containing MUSARPOMS are shown in Table 4.](#)

reflecting the highest value ( $8.01 \times 10^3 \mu/L$ ) and differed only from treatment 2  $6.40 \times 10^3 \mu/L$ . All values however, were within normal reference ranges ( $5 - 10 \times 10^3 \mu/L$ ) by Mitruka and Rawnsley (1977) and  $4.33 - 11.02 \times 10^3 \mu/L$  by Ezeetal. (2010). These results are in agreement with the report of Ezeetal. (2010) who observed no association of sex and age with haematological values. According to Swenson (1990) red blood cell counts are influenced among other factors by nutrition, physical activities and volume and its reduction indicates anaemia. RBC values significantly ( $P < 0.05$ ) differed from each other with Treatment 6 ( $P < 0.05$ ) differences in the RBC of pigs. Treatment 6 recorded the highest red blood cell (RBC) value ( $8.01 \times 10^3 \mu/L$ ) while the lowest value was obtained from pigs on Diet 2 (10% inclusion of MSP<sub>25%</sub>),  $6.40 \times 10^3 \mu/L$ . White blood cells and its differentials as well showed no significant ( $P < 0.05$ ) differences except Monocyte. Percentage Monocyte of Treatment 1 (17.45%) and 7 (17.70 %) however differed significantly ( $P > 0.05$ ) from Treatment 6 (12.15%). However, Treatment 4 recorded the highest Packed Cell Volume (PCV) (38.98 %) while the lowest PCV was recorded for pigs on Treatment 2 with a value of 32.73%. The highest haemoglobin concentration were recorded from Treatment 7 (15.65 g/dL) followed by those on Treatment 6 (11.92 g/dL); while the pigs on the Control diet recorded 11.25 g/dL. There were however, no significant differences in the Hgb concentrations of the diets. The platelet concentration (PCT) showed that Treatment 6 recorded the highest concentration ( $0.39 \times 10^3 \mu/L$ ) and lowest concentration  $0.14 \times 10^3 \mu/L$  in Treatment 2. All values however (irrespective of, were within normal reference ranges ( $5 - 10 \times 10^3 \mu/L$ ) by Mitruka and Rawnsley (1977) and  $4.33 - 11.02 \times 10^3 \mu/L$  by Ezeetal. (2010). These results are in agreement with the report of Ezeetal. (2010) who observed no association of sex and age with haematological values.

## Conclusion

The results from this study showed that Utilizing-utilizing these ingredient as a replacement for the conventional energy source (Maizemaize), did not have significant influence on the performance and blood Metabolites-metabolites of the growing pigs. Weight gain in particular did not differ significantly among Treatments. It is therefore indicative that the MUSARPOMS grades at the respective replacement levels (10 and 20 %) compared well with maize (0%) of their inclusion in diets.
