

Editor's Comment:

Accepted after the revisions listed under the present Table

- the article needs correction of the English language
- the Abstract should be structured, as recommended in the guidelines for the authors, available on Journal site
- the author should specify the clinic where the described intervention took place, and the time as well
- the ethical aspects should be addressed (ethical approval provided by the institutional committee)
- a much more detailed description of the intervention is necessary – type of anesthesia, instruments used, access, suture etc.
- in the Discussion section the authors say that “According to WHO classification(2005), odontomas can be divided into three groups”, but only two groups are presented
- in the Discussion section the authors should also discuss about similar cases in the literature
- the Conclusions should refer to the presented case, not to general aspects from literature.
