

Review Form 1.7

Journal Name:	Journal of Advances in Medical and Pharmaceutical Sciences
Manuscript Number:	Ms_JAMPS_95689
Title of the Manuscript:	coagulation parameters among individuals with Hepatitis B infections in Okada, Edo state , Nigeria
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
<ol style="list-style-type: none"> Is the manuscript important for scientific community? (Please write few sentences on this manuscript) Is the title of the article suitable? (If not please suggest an alternative title) Is the abstract of the article comprehensive? Are subsections and structure of the manuscript appropriate? Do you think the manuscript is scientifically correct? Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. (Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments) 	The examined paper is very interesting. It highlights that the liver plays a fundamental role in hemostasis and it is known that quantitative abnormalities of coagulation factors occur in a pathological condition. The study was conducted to determine changes in platelet count, activated prothrombin time, and prothrombin time. Starting from this assumption, it has developed in a very particular and precise way in all its parts. At the end of the paper it is highlighted that viral hepatitis B causes alterations in coagulation factors and it is essential that the support, control and evaluation of the coagulation process should be important for routine operations in the management of patients with hepatitis B infection. The inserted tables are also very well structured, allowing you to see the results achieved in a simple way. The bibliography has been elaborated in a very particular and complete way: this guarantees the scholar, who approaches this paper, the possibility of deepening the themes that are treated in this paper.	
Minor REVISION comments		
<ol style="list-style-type: none"> Is language/English quality of the article suitable for scholarly communications? 		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
