PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. (Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)	The point of research in the submitted manuscript is vital and important for the scientific community as it deals with the important topic of climate change. It targets an important phenomenon: Rainfall. The title is attractive and complies with the content of the manuscript. The abstract is clear and to the point. I suggest adding 'Statistical tests' to the keyword list. The structure of the manuscript is accepted and the findings are of interest. However, the whole manuscript needs to be proof read (English style of writing). The 'Introduction' must be improved as it lacks literature on both area and previous work. The authors need to enhance the quality of Figure (1). The authors must use the SI units only, please omit (ft and inch units). The geographical location must be properly written X° X.X' not to use 0 and 1 as superscripts! The most irritating point is the 'references'. Authors must adhere to the journal's reference style (X & Y or X and Y). Too many references are in the list but not in the manuscript itself, or with different year of publication! So please carefully revise.	
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	The whole manuscript needs to be proof read (English style of writing).	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
