

## Review Form 1.7

|                          |  |
|--------------------------|--|
| Journal Name:            | Journal of Advances in Medicine and Medical Research                     |
| Manuscript Number:       | Ms_JAMMR_97542   |
| Title of the Manuscript: | TO STUDY HIGH-SENSITIVITY CRP LEVELS IN OVERWEIGHT AND OBESE INDIVIDUALS |
| Type of the Article      | Original Research Article  |

### General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journaljammr.com/index.php/JAMMR/editorial-policy> )

### PART 1: Review Comments

|   | Reviewer's comment   | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|---|--|---|
| <p><b>Compulsory</b> REVISION comments</p> <p>1. Is the manuscript important for scientific community?<br/>(Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable?<br/>(If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.<br/><b>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</b></p> | <p>1. Yes, this is a critical healthcare issue in India and around the world.</p> <p>2. Yes, it is suitable.</p> <p>3. Please add a sentence about the baselines of the three groups. Eg. Age and gender was not significantly different between the BMI groups. -or – Age was significantly higher in the normal BMI group but genders were similar....</p> <p>4. Yes, they are appropriate and sufficient.</p> <p>5. Please include results about your groups baselines. Were there significant differences in age or genders among the three groups. Gender and increasing age can effect CRP levels. From your data I cannot tell if age in the three groups was the same. Or that gender was similar in all groups. If they are comparable it will strengthen your argument even more. If they are not the same perhaps you could show the minimal effects compared to BMI.\</p> <p>obesity individuals" in the first line of the introduction should read "obese individuals</p> <p>6. References seem sufficient.</p> |   |
| <p><b>Minor</b> REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>   | I have provided some minor suggestions in attached revision  |   |
| <p><b>Optional/General</b> comments</p>   | Thank you for addressing this important research need. Please continue your efforts :)   |   |

### PART 2:

|  | Reviewer's comment  | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--|---|---|
| Are there ethical issues in this manuscript? | (If yes, Kindly please write down the ethical issues here in details) |   |
