

### **Editor's Comment:**

I have read the text of the manuscript, the reviewers' reports, and a revised version of the text of the manuscript.

I consider the topic of the manuscript relevant. The research results have scientific and applied value. At the same time, I had some comments about the text of the manuscript, namely:

1. The first sentence in the abstract is not formulated very well. It is better to divide it into two sentences. In the first sentence, indicate the purpose of the study, and in the second - the place of its implementation: "The purpose of this study was to study the influence of microbial inoculants and molybdenum on yield and economics of chickpea (*Cicer arietinum* L.). The research was carried out in ....."

2. The text of the manuscript does not fully meet the requirements for its design. Authors must check the correctness of the design of their article, starting with the abstract and ending with a list of sources. Special attention should be paid to the correct design of the names of sections and subsections (numbering, etc.). Perhaps the authors should review articles that have already been published in this journal. Authors will then have a template for adjusting the design of their manuscript.

3. At the end of the "Materials and Methods" section, it is worth indicating the purpose of using the variance method. Why is the last sentence in this section enclosed in quotation marks?

4. The conclusions should be somewhat expanded. In particular, it is possible to indicate the prospects for further research.

5. I urge the authors to carefully check the text of the manuscript for typos and grammatical errors.

6. Tables should probably be placed in the text of the article, and not in the appendices. Also, check that all abbreviations are deciphered the first time they are mentioned. Such decoding should be performed both in the text of the article and in the abstract.

Thus, I believe that after taking into account the listed remarks, the article on the topic " Influence of microbial inoculants and molybdenum on yield and economics of chickpea (*Cicer arietinum* L.)" can be published in the International Journal of Environment and Climate Change.
