PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. (Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)	<p>This short report is consistent with the importance placed on vit.D consumption in autism. However, most of the recent literature promotes D3 consumption by the mother via sun exposure or fruit diet during gestation and by the neonate beginning at birth to PREVENT the development of autism, which is today essentially irreversible once it appears. It would have been better if the children had been started on vit. D supplement at birth. It seems that in this study, vitamin D was promoted only after a diagnosis of autism was made.</p> <p>Feeding cGP to the neonate/infant can serve this purpose, as with vit. D. It would have been helpful in this report if the babies who were breast-fed were distinguished from those who were bottle-fed.</p> <p>I would suggest some revision be applied before accepting this paper for publication.</p>	
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
