

### **Editor's Comment:**

Regarding the paper sent:

Generally speaking, it is interesting to see the experiences of villages, towns, regions from different countries.

The final of the analysis interests us, that is the respective administrative unit is capable of developing and improving the quality of the activities.

The keywords, 1-2 more and to say economic potential, not simply economic.

At the Methodology, use the documents in the fields, both qualitative and quantitative and observations in reality.

Conclusions have to underline that the situation analyzed can be used also for other villages, rural regions..., that is it is not a singular one.

References are wrongly written: author in the alphabetical order of their last names and, immediately after, the year of publishing (not at the end of the line).

For example, Darmalaksana , W (2020)..to be the first Reference and Wijaya Bayu... (2014) the last one.

Of course, put the references with no specific authors (BPS, BPSS at the letter B).

Ok, as a short article.
