<p><b>Optional/General</b> comments</p>	<p>Due to the issue of malnutrition, which hinders social and mental development in addition to slowing the growth and development of children, as well as pregnant and breastfeeding women and adolescent girls. It also increases the likelihood and duration of illness. Long-term consequences of nutritional deficiency include cognitive and developmental deficits as well as decreased resistance to infection. The aim of the current study is to assess the food security of agricultural families, and to understand the value of nutritional gardens. With a detailed practical protocol, <b>I agree to publish this article</b> to support its benefit, and also to receive awareness-raising support for its practical translation on a large scale, especially in areas affected by this burden.</p>
