If you have suggestion of additional references, please mention in the review form. <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Major comments: In the first place, there was no need for a drug test because the symptoms were not allergic to ceftriaxone. Before conducting an allergy test considering the cross-reactivity of the side chains of beta-lactam antibiotics, it is necessary to reconsider the process that led to the diagnosis of drug allergy. If the diagnostic criteria for ENDA are to be questioned, it is unnecessary to include detailed skin test results as described. Instead, it is necessary to compare the diagnostic rates of allergy diagnosis based on ENDA diagnostic criteria and actual skin tests.</p> <p>Minor comments: Please explain in detail regarding Table 1</p>
