

Editor's Comment:

I have carefully read the manuscript, which appears very interesting and scientifically sound. However, the Author(s) has/have not fully met the Reviewers' suggestions, and so they cite a "Compound" from the plant extract, but this is not chemically identified. It would be better - if the Author(s) is/are unable to correctly find the chemical nature of the extract, to change "compound" into the more suitable "solid crystalline residue" coming from solvent evaporation. Moreover, "N-hexane" is wrong and must be changed into the correct form "n-hexane". Provided that these amendments are made, the manuscript decidedly deserves publication.
