In the introduction, instead of the medicinal properties mentioned in several paragraphs, information about the distribution of genotypes in the region and country should be given.            What was the basis for naming the genotypes (in Table 1)?            Why are genetic indicators not examined in this study?            What characteristics were there in the control varieties?            Finally, what is the criterion for selecting superior traits for selecting genotypes?!</p>
