

Review Form 1.7

Journal Name:	Asian Journal of Cardiology Research
Manuscript Number:	Ms_AJCR_109172
Title of the Manuscript:	Heart arrest revealing a killer coronary artery
Type of the Article	Case study

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>1. Yes 2. Yes 3. Yes 4. Yes 5. Yes 6. Yes.</p> <p>Corrections: i) Reorganise and reframe the keywords.</p> <p>ii) On admission, after conditioning the patient, physical examination and an ECG were normal. Cardiac ultrasound showed heart chambers of preserved size and systolic function. Coronary angiography revealed birth defects of the left coronary and right coronary artery which both originate from the antero-right sinus with an inter-aorto-pulmonary malignant course. The coroscanner confirmed the diagnosis showing the birth of the left coronary artery of a common trunk with the right coronary from the right anterolateral sinus and describes a malignant inter-aorto-pulmonary path without athero-calcic (calcific) coronary infiltration (Figure 1). Magnetic resonance imaging demonstrated the same angiographic and CT findings, moreover, it found no argument in favor of interstitial fibrosis, or myocardial infarction or myocarditis (Figure 2).</p> <p>The corrected form is marked in green.</p> <p>iii) Figure 1: Please mention the details about the figure –whether it is from the case itself of please provide the reference. Also put arrows to delineate the right coronary artery and the left coronary artery and the inter-aorto pulmonary path.</p> <p>iv) Arrows to point out the ostium of the two coronaries, and the common inter-aorto pulmonary trunk. References to be cited properly for the figure.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	Yes	
<p>Optional/General comments</p>	None	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
