

**Editor's Comment:**

I have gone through the comments of the reviewers as well as the manuscript. This is a cross-sectional study and I would appreciate the authors highlighting the Prevalence and the Risk factors of Cardiovascular diseases in Bangladesh. The facilities at the different level centers could be highlighted, but never the less. The manuscript is well-structured and quite informative for epidemiologists, cardiologists, physicians, and other healthcare workers.

The decision for this manuscript is: Accepted.
