For this study, monthly meteorological data for experimental year against normal for 25years. Effect of different doses of nitrogen and foliar sprays of nano nitrogen on growth yield attributes and yield of Bt cotton, Effect of different doses of nitrogen and foliar sprays of nano nitrogen on uptake of nutrients by cotton and available nutrients in soil are shown by table. Finally the author reached the result that the foliar application of nano urea reduced the dosage of conventional nitrogen by 25 per cent. There was linear increase in seed cotton yield (kg ha⁻¹) with increasing levels of nitrogen levels. References are recent and title suit the manuscript. The paper can be published.</p>
