

Editor's Comment:

"Parameter Estimated of Seasonal Auto-Regressive Integrated Moving Average Model with AR(1) Error Process" is a methodological text in which the authors seek, through a fresh look, to improve the estimation process of this model, considering that the results obtained are significant.

Of course, proof of this significance can only be effective after long and repeated practice of the method. In any case, this does not take away merit from the authors' approach, which seems original to me.

It may be published in its present form.

P.S.:

-Anyway, I recommend one last review trying to improve your English.
